CDBG-MIT Grant Application  
TC Jester Detention Basin

Harris County Flood Control District is seeking assistance through the 2015 Floods State Mitigation Competition under the Community Development Block Grant Mitigation (CDBG-MIT) program for the following flood risk reduction project. The CDBG-MIT program is funded through the United States Department of Housing and Urban Development (HUD) and administered at the state level by the Texas General Land Office (GLO). Applications are due to GLO by October 28, 2020 and awards are expected in 2021.

I. SCOPE:

TC Jester Detention Basin is a stormwater detention mitigation project within the Cypress Creek Watershed that is intended to address current flood damage reduction needs within the Cypress Creek Watershed and serve LMI (Low to Moderate Income) areas. This project is a functionally independent first phase of a multi-phase project that will ultimately, upon its completion, remove 271 structures from the existing floodplain and benefit 598 structures within the LMI block group.

The benefit of this project is to mitigate the risk of future riverine flooding in the project area by providing a storm water detention basin that will retain storm runoff and reduce the limits of the floodplain and lower the water level within the floodplain.

There are approximately 2689 structures located in the 100-year existing floodplains that are at risk of experiencing inundation due to riverine flooding. Approximately 479 of those structures are within an LMI block group.

This proposed project will utilize an existing Harris County detention pond with an additional 0.18 acres of delineated wetlands to create a basin footprint of 25 acres. The proposed project will mitigate against the risk of flooding by creating a detention basin to capture the overbank volume in the project area so that the benefits provided by the additional pond volumes can be quantified. The proposed detention basin will achieve a maximum WSEL reduction of 0.49 feet for the 100-year storm event. This proposed project will remove 87 structures from the existing 100-year floodplain.

This proposed detention basin is the first phase of a detention basin that will ultimately expand to encompass the entire 93 acres site and provide an estimated WSEL reduction of 0.62 feet. When complete, the full detention basin will remove 271 structures from the existing floodplain and 598 structures within the LMI block group will benefit.

II. COST ESTIMATE:

Total Estimated Cost of this proposed project is $10,244,200.00.

$10,000,000.00 of this cost will be funded by a CDBG-MIT Grant. The remaining $244,200.00 will be funded by HCFCD.

See the attached “CDBG-MIT: Budget Justification of Retail Costs (Former Table 2)” for a detailed breakdown of the estimate construction cost.
III. CDBG NATIONAL OBJECTIVE

Urgent Needs Mitigation (UNM)

IV. ATTACHMENTS

## CDBG-MIT: Budget Justification of Retail Costs
### (Former Table 2)

Cost Verification Controls must be in place to assure that construction costs are reasonable and consistent with market costs at the time and place of construction.

**Applicant/Subrecipient:** Harris County Community Services Department (on behalf of Harris County Flood Control District)

**Site/Activity Title:** TC Jester Stormwater Detention Basin

### Eligible Activity:
Flood Control and Drainage Improvements

1. Identify and explain the annual projected operation and maintenance costs associated with the proposed activities.

This project along with all HCFCD CDBG-MIT projects will be included in the Annual Operational and Maintenance Budget prepared and funded by the HCFCD. All costs associated with the successful maintenance and operation of this project as well as all other projects under the responsibility of HCFCD are included in this budget.

2. Identify and explain any special engineering activities.
